

DRIVEN BY INNOVATION

Colors for a baby's room

Safe, beautiful and durable paints for spaces where children grow, play and dream.

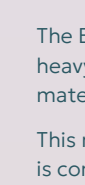

Choosing Low VOC Paints

When painting a baby's room, it is important to choose paints with low levels of Volatile Organic Compounds (VOCs).

VOCs are substances released into the air as paint dries and are often responsible for the strong "paint smell" that lingers in a room.

At high levels, they can affect indoor air quality, especially in spaces where children spend many hours.

For this reason, we recommend paints labelled **Low VOC** or with **very low VOC emissions** that also carry the **IAC Gold certification**, helping create a healthier and more comfortable environment for the whole family.

Safety Standards such as EN 71-3

Children often touch walls, furniture and may even put objects in their mouths. That is why it is important that the products used in their room meet recognized safety standards.

The European standard EN 71-3 concerns the migration of heavy metals that may be present in paints and coating materials.

This means the product has been laboratory tested and is considered safe even in cases of direct contact with children.

Easy-to-Clean Paints

Walls in a child's room face everyday challenges: markers, fingerprints, stains and little drawings are all part of daily life.

For this reason, we recommend paints that can be cleaned easily without damaging the surface or removing the colour.

This helps keep the room clean and beautiful for longer, reducing the need for frequent repainting or repairs.

Don't Forget Wooden Surfaces

It's not only the walls that deserve attention. A child's room also includes many wooden surfaces, such as beds, desks, shelves and toys.

For these surfaces, we recommend water-based products, as they have a milder odour and are more suitable for indoor use than traditional solvent-based products.

The Products We Recommend:

Master™ Eco

Why we recommend it:

- Eco-friendly paint with low VOC content
- Provides a flawless matte finish
- Creates a healthier indoor environment

Master™ Easy Clean

Why we recommend it:

- Extremely low VOC content (<1 g/L) with a mild odour
- Easy to clean from stains and marks
- Ideal for children's rooms with everyday use
- Helps walls stay beautiful for longer

Wood Aqua™

Why we recommend it:

- Eco-friendly water-based coating for wooden surfaces
- Available in gloss, satin and matte finishes
- Ideal for children's furniture and wooden details
